Quiz Instructions

It's time to check your knowledge! Use this quiz to create a custom study guide. Note any answers that were marked incorrect, so you can study the relevant material and try this quiz again.

If you don't know the answer to a question, please do not guess. Instead, select "I don't know". It's OK not to know everything and to admit when we're unsure.

Check the [Active Record Validations docs](#)

(https://guides.rubyonrails.org/active_record_validations.html) if you need help!

Question 6

1 pts

Fill in the blank. What code would you need to write to return an array of pre-formatted error messages if the dog is not valid?

```
def create
  dog = Dog.create(name: "Fezzik")
  if dog.valid?
    render json: dog, status: :created
  else
    render json: { errors: [blank] }, status: :unprocessable_entity
  end
end
```
